PROJECTS

TaskMaster**BIM 5TH Semester**

- A web-based task management application designed for small to mid-sized companies
- Made with an aim to improve communication, streamline task assignments, and enhance productivity
- Features include: Task Assignment and Management, Real time update and Notifications, Task History and Tracking, Workload Management
- Tech Stack : Vue.js, Firebase

Interest Based Platform**BIM 6th Semester**

- Interest based platform is a system for providing our users with personalized feed only specific to user interests while also providing them authority to keep unwanted content out of their feed
- The system predicts user's interests by monitoring their interactions(posts, likes and comments) within the platform along with classifying the posts to various topics and genres. This system is available as a web application.
- Tech Stack: Vue.js, Inertia.js, Laravel, FastApi

EstateInsight**BIM 6th Semester**

- A web app made where people can list their listings to sell and buyers can come to see the listings and buy it along with that, there is an emphasis to help both buyers and sellers to make informed decisions using features such as property valuation, city metrics for buyers to know about the city in which they want to purchase a listing and data visualization
- Tech Stack: Vue.js, Inertia.js, Laravel, FastApi
